

$$2. \quad s(t) = -16t^2 + 40t + 4 \quad t \geq 0$$

$$c) \quad 0 = -16t^2 + 40t + 4$$

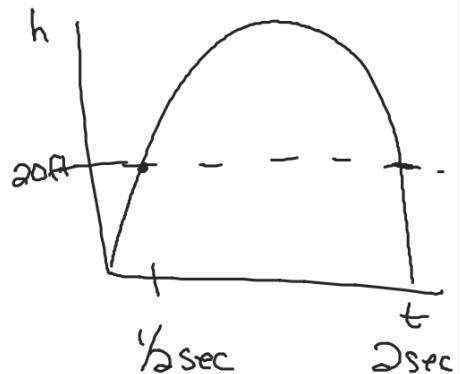

$$0 = -4t^2 + 10t + 1$$

$$0 = -4t^2 + 10t - 4$$

$$0 = (2t - 1)(2t - 4)(-4)$$

↓              ↓

$$\begin{aligned} 2t &= 1 & 2t &= 4 \\ t &= \frac{1}{2} \text{ sec} & t &= 2 \text{ sec} \end{aligned}$$

$$3) \quad s(t) = \frac{t}{e^t} \quad \text{sin m an t ins}$$

$$(a) \quad v(t) = \frac{1-t}{e^t}$$

$$s(t) = t \cdot e^{-t}$$

$$s'(t) = t \cdot e^{-t}(-1) + e^{-t}(1)$$

$$= -t e^{-t} + e^{-t}$$

$$= e^{-t}(-t + 1)$$

$$= \frac{-t+1}{e^t}$$

$$= \frac{1-t}{e^t}$$

$$s'(t) = \frac{e^t(1) - t(e^t)}{(e^t)^2} = \frac{e^t(1-t)}{e^{2t}} = \frac{1-t}{e^t}$$

(b)  $v(t) = s'(t)$

$$\cancel{e^t} \circ = \frac{1-t}{\cancel{e^t}} \cdot \cancel{e^t}$$

$$\circ = 1-t$$

$$\underline{t=1 \text{ sec}}$$

acceleration function: the gradient of velocity

$$a(t) = \lim_{h \rightarrow 0} \frac{v(t+h) - v(t)}{h} = v'(t) = s''(t)$$

Note:  
gas  $a(t) > 0$  velocity is increasing  
breaks  $a(t) < 0$  velocity is decreasing  
cruise  $a(t) = 0$  velocity is constant

Ex] for  $s(t) = 2t^3 - 21t^2 + 60t + 3, t \geq 0$

$$v(t) = s'(t) = 6t^2 - 42t + 60, t \geq 0$$

a) Find the average acceleration from  $t=1$  to  $t=4$   
*Slope of secant line going thru 2 points*

code for - ARoC  $(1, 24)$  and  $(4, -12)$

$$\frac{\Delta y}{\Delta t} = \frac{y_2 - y_1}{t_2 - t_1} = \frac{24 - (-12)}{4 - 1} = \text{points } -12 \text{ m s}^{-2}$$

b) Find the 'instantaneous' acceleration at  $t=3$  sec  
and Explain what it means

$v(t) = 6t^2 - 42t + 60$   
code for -  
slope of tangent line  
at  $t = 3$

$$a(t) = v'(t) = s''(t) = 12t - 42, t \geq 0$$

$$\begin{aligned} a(3) &= 12(3) - 42 \\ &= 36 - 42 = -6 \text{ m s}^{-2} \end{aligned}$$

This means that the velocity is decreasing  
(6 meters per second each second)  
at time  $t = 3$  seconds.

\* Speed is the absolute value of velocity  
why it's true:

$v(t) > 0$  particle  $\rightarrow$   
 $v(t) < 0$  particle  $\leftarrow$

\* velocity - tells us both the speed and the direction of particle

\* When velocity and acceleration have the same sign, the object is speeding up

\* When velocity and acceleration have different signs, the particle is slowing down.
